                                                           The isolated DNA molecule of the invention confers on M. tuberculosis an ability to enter cells and to survive within macrophages. It encodes a polypeptide having a mol. wt. of about 50-55 kDa, pref. 52 kDa. The AA sequence represents a highly hydrophilic protein with a hydrophobic region at its carboxy terminus. It could be a secreted protein, a cytoplasmic protein, or a surface protein with its carboxy terminus attached to the outer membrane of the organism. The deduced AA sequence is in AAK71931.

The encoded protein sequence is given in AAM02301. The DNA was obtd. by ligating M. tuberculosis genomic DNA fragments into pBluescript invasive clones. The DNA includes 2 separate coding regions (Ser also AAT33657-58) coding for the cell entry (AAM02302) and macrophage survival (AAM02303) proteins. It can be used to produce the cellular uptake proteins used as vaccines or to facilitate uptake of other

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes a Mycobacterium tuberculosis cellular uptake protein fragment, which confers on M. tuberculosis an ability to enter mammalian cells and to survive within mariophayes. The protein can be used in a vaccine to prevent M. tuberculosis infection, and provide for the uptake in cells of, e.g. antibiotics, DMA fragments or anti-neoplastic agents. Antibodies raised against it can be used to treat mammals already exposed to M. tuberculosis, to induce a passive immunity and prevent disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            tggatgtgtccacccgccaggccgccgaagccgacctggccggcaaagccgctcaatatc

A specific genetic deletion of this region results in an avirulence phenotype of the mycobacterium. 2 Other deletion regions (see AAT33535 and AAT33536) have also been detected identification involved screening a BCG cosmid library with a radiolabeled probe obtained following DNA subtraction between virulent Mycobacterium tuberculosis HiJRv and avirulent BCG. The deletions provide westell markers for the identification of an avirulent, or a virulent, mycobacterial phenotype. Determination of avirulence requires the detection of the presence or absence of
                                                                                                                                                                                                                                                               gigotagecaaactggeegeeeeeeggegegaceaaceeegaceacaceeeggicaic 357

```
A DNA molecule (AAT33658) codes for a protein (AAW02303) that confers on Mycobacterium tuberculosis an ability to survive within macrophages. It is a fragment of a larger molecule (AAT33656) obtd. by ligating M. tuberculosis genomic DNA fragments into pBluescript I vector and screening recombinant E. coli strains for Hela cellinvasive clones. It can be incorporated into a vector and used for prodn of recombinant macrophage survival protein, which is useful in vaccines or for facilitating uptake of other materials, e.g. therapeutic genes, into mammalian cells. A second DNA molecule tuberculosis the ability to enter mammalian cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         118 egtecegacgaqetqqeecqetacqeecagcqqqtcatggactqqetacaceceqacqgc 177

                                                                                                                                                                                                                                      Mycobacterium tuberculosis DNA ^{\circ} confers ability to enhance uptake therapeutic agents e.g. antibiotics, also useful in vaccines
                                                                                                                                                                                                                                                                                                   The present sequence encodes a Mycobacterium tuberculosis cullular uptake protein fragment, which confers on M. tuberculosis an ability to survive within mercophages.

The protein can be used in a vaccine to prevent M. tuberculosis infection, and provide for the uptake in calls of, e.g. antibiotics, DNA fragments or anti-neoplastic agents. Antibodies raised against it can be used to treat mammals already exposed to me tuberculosis, to induce a passive immunity and prevent disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cgtcccgacgagctggcccgctacgcccagcyggtcatggactggctacaccccgacygc

synthase proteins. Also described are: (1) polypeptides encoded by all or part of the DNA: (2) expression vectors containing the DNA: (3) host cells transformed by the vectors; (4) preparation of the polypeptides by culture of the transformets: (5) preparation of avermectin aglycon or its derivatives by culture of transformets so of the avermectin aglycon microorquisms: and (6) oliqonucleutides of 5-60 bases in length containing sense on antiseuse sequences from the avermectin aglycon synthase DNA. The enzymes are useful for the production of modified
Avermectin adjycone synthase DNA and proteins encoded by all or part of it for the production of avermectin and its derivatives for drug and agrochemical use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            22011 caccaccctcatcacccaacgcgccaccctcatgcaaaccatgccccccggcaccatgac 22070

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           host cells, and methods for producing novel polyketides by culturing host cells are claimed. The polyketides obtained are useful as antibiotics and insecticides. Fermentation products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               associated with reduction. Novel PKS are provided in which in which the reductive loop in a selected module of the Type I PKS is replaced with the equivalent segment from the same or different PKS gene cluster or by a mutated or synthetic segment. Vectors and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of DNA encoding the first 2 modules of the avermectin polyketide synthase (PKS) of Streptomyces avermitilis. The invention relates to nucleic acids encoding a Type I PKS such as avermectin in which a polylinker with multiple restriction sites replaces or 1 more PKS genes encoding enzymes associated with reduction. Novel PKS are provided in which in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 12381 BP; 1884 A; 4561 C; 4005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mutated Type I polyketide synthase containing a extension module for replacement of a reductive % \left( 1\right) =\left\{ 1\right\}

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                             or its derivatives by culture of transformed avermectin-producing microorganisms; and (6) oligonucleotides of 5-60 bases in length containing sense or antisense sequences from the avermectin aglycon synthase DNA. The enzymes are useful for the production of modified forms of avermectin and of the intermediates in its biosynthesis, for
                                                                                                                                                                                                                                                                 synthase proteins. Also described are: (1) polypeptides encoded by all or part of the DNA; (2) expression vectors containing the DNA; (3) host cells transformed by the vectors; (4) preparation of the polypeptides by culture of the transformants; (5) preparation of avermectin aglycon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tango-77; human; IL-1ra; cytokine superfamily; inflammation; inhibition; interleukin-1 receptor; IL-1R; regulation; asthma; rheumatoid arthritis; chronic myelogenous leukaemia; psoriasis; inflammatory bowel disease; growth factors; treatment; IL-1 receptor complex; BAC; ss.
                                                                                                                                                                    AAX02956-X03048 and AAX22301-X22304 are overlapping BAC genomic sequences containing alternatively spliced forms of human IL-Ira. Such sequences containing alternatively spliced forms of human IL-Ira. Such sequences are used in the method of the invention which describes the isolation of a novel human TANGO-77 encoding nucleac acid and protein. Tango-77 is a member of the cytokine superfamily that is expected to inhibit inflammation by binding to the interleukin-1 receptor (IL-IR). may also bind to a new receptor so could regulate other cellular processes associated with acute or chronic inflammation, e.g. asthma, chronic myelogenous leukaemia, rheumatoid arthritis, psoriasis and chronic myelogenous leukaemia, rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         02-JUL-1998;

DNA encodit under the control of an exogenous promoter pref. lac UV5. The example uses the native beta-1, 3-glucanase gene isolated from Oerskovia xanthineolytica genomic DNA and expressed in pUV5-GIS.
                                                                                                                                                                                                                                                                                                                                 Human colon cancer cell line polynucleotide sequence SEQ ID NO:2475

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CAAA00010 to AAA02716 represent polynucleotides isolated from cDNA CC libraries constructed from human colon cancer cell lines. The present CC invention also describes a method of detecting differentially expressed CC genes correlated with a cancerous state of a mammalian cell, comprising CC detecting at least one differentially expressed gene product in a test CC sample derived from a cell suspected of being cancerous, where detection CC of the differentially expressed gene product is correlated with a CC cancerous state of the cell from which the test sample was derived. CC The polynucleotides sequences can be used in a method for detecting CC differentially expressed Tenes correlated with a cancerous state of a CC mammalian cell. The polynucleotides can also be used as probes for CC detecting and mapping related genes. They can be used in diagnosis and CC pre-metastatic or metastatic cancerous states, stages of cancer, or cresponsiveness of cancer to therapy). This is particularly for breast cancer, estrogen receptor-positive breast cancer, oestrogen receptor-positive breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                               cc of the 5248 polynucleotide sequences given in AAZ12532 to AAZ1779. The cc polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, anapping, tissue typing or profiling, forensics, genetic analysis and detection of polynuclphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and continued arrays for diagnostics (which may be used to construct a cencoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to condition of genetic predisposition or susceptibility to a disease such as cc andero. The polynucleotides of the invention are especially used in the continues and antagonists can also be used to screen for contride analones and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             28-JAN-1998;

The present invention describes a library of human polynucleotides comprising the sequences given in AAZ1253 to AAZ1779. Also described is a method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell suspected of being cancerous, where the gene product is encoded by one of the 5248 polynucleotide sequences given in AAZ1233 to AAZ1779. The polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polynuchisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer). The polyncleotides of the invention are especially used in the diagnosis, prognosis and management of colorectal cancer, breast cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  214 teaccetgaycaaccagcaatacgacgqcatgtcacggctaagtggctacctgaccccc 273

Title:

```
GENERAL INFORMATION:
APPLICANT: Riley M.D., Lee W.
TITLE OF INVENTION: DNA Molecule Encoding for Cellular
TITLE OF INVENTION: Uptake of Mycobacterium Tuberculosis and Uses thereof
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SOFTWARE: Fatentin Release #1.0, Version #1.25

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre of Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Submitted (12-APR-2000) to the EMBL/GenBank/DDBJ databases
Submitted (12-APR-2000) to the EMBL/GenBank/DDBJ databases
This sequence is a single read and was generated as part of a large scale clone-end sequencing project of the Tetraodon nigroviridis
genome. For more information, please take a look at http://www.genoscope.cns.fr/Tetraodon.

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley brosophila Genome Project (BDCP).

The BDCP is constructing a physical map of the brosophila melanogaster genome using these BACs. For further information please see http://www.fruitily.org The BDCP prosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Plater de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial

This GSS is part of a random genomic sequencing program of thirteen
yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
exiguus, Saccharomyces servazii; Zygosaccharomyces rouxii,

Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila,
Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to
keywords for description of this sequence and for the sequence of
the other extremity of this insert.
